

# Learning To Dive With

## ESPERANCE

# Diving & Fishing

*Onto & Into The Ocean*

### Class Room and Theory

Before you start we need to teach you some theory about scuba diving. The theory covers, equipment, diving techniques, the marine environment and safety procedures. You will find the sessions interesting and informative. These will combine to boost your confidence about using the equipment.

### Confined Water and Pool Sessions

We need to make you comfortable with the equipment and the environment. In safe Waters you will learn the basic SCUBA diving skills including breathing underwater, neutral buoyancy, equipment handling, swimming techniques and underwater emergency procedures. You can stop and ask your instructor questions while you practice until you are ready for your first open water experience.

### Ocean Dives

This is the day your final step out into the open ocean and the chance to use your newly acquired skills! 4-5 ocean dives including two boat dives under the watchful eye of your instructor you can explore the underwater world first hand... You will be delighted. Dont Put It off Any Longer
